

# CANOPIES & WALKWAYS

PROTECT YOUR CUSTOMERS,  
GUESTS, & EMPLOYEES

From large-scale airport walkways to boutique entrance canopies, Brasco offers protective structures for all budgets. Our entrance canopies and walkways are made from top grade aluminum and engineered to meet local wind, snow and drift load requirements.

Brasco delivers its walkways in pre-fabricated sections to reduce field labor and optimize quality control.

Keep it simple with standard anodized finish and tempered glass, or match your walkway or canopy to your building's branding and style with powder coat finish and optional perforated aluminum panels. Our walkways can be virtually any length, and our wide array of roof designs ensure your investment will enhance your property.

Brasco's engineering team verifies all smoking shelters meet local wind load and snow load requirements.

## Why Walkways & Canopies?

Providing walkways and protective canopies for your customers, guests, and employees dramatically increases how well pedestrians perceive their needs are being met. By providing facilities that are comfortable, well-maintained, and easy to keep clear of debris and snow or ice, you can proactively prevent injury while improving the curb appeal of your property.

Brasco recommends a design that:

- Complements the architecture and curb appeal of your property.
- Allows for the incorporation of existing surfaces including steps as well as plants and pillars.
- Keeps scale, proportion, and function in mind.
- Makes safety a top priority—consider adding lighting and helpful signage, and ensure your surfaces are slip resistant.
- Is durable and long-lasting. For example, Brasco's aluminum frames will never rust.
- Reduces energy costs with full coverage without giving up natural sunlight and visibility.

Whether you are seeking to cover an outdoor seating area, spruce up a doorway, or provide protection to employees and visitors with a long walk between parking lot and entranceway, Brasco has you covered.
