

POLYCARBONATE

Brasco offers a variety of glazing options for shelter roofs. The most common and long-lasting options include structured polycarbonate and monolithic polycarbonate panels because they are virtually unbreakable and able to withstand impacts greater than glass and acrylic.

Consult with your Brasco account manager for guidance on the best suited option for your shelter project and location.

STRUCTURED POLYCARBONATE

85% light transmission. Provides thermal insulation for colder regions. Light in weight.

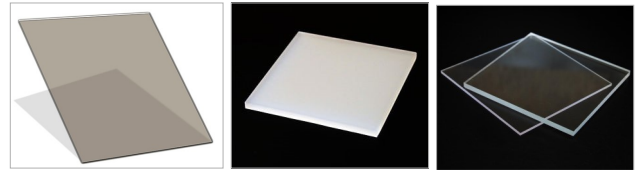

BRONZE

WHITE

CLEAR

MONOLITHIC POLYCARBONATE

75% light transmission. Heavier in weight than Twinwall.
