Artwork Application Type:

Vinyl Decal *(Available in all standard Pantone colors. Can be applied to aluminum, glass, and acrylic glazing.)*

Die-Cut Vinyl Decal– Transfer of the artwork's image, logo, text, or design elements only, with no other background. Recommended for text and logos with basic detail.

Full Vinyl Decal– One solid vinyl sheet with printed image, logo, text, or design elements. Recommended for complex designs with high detail. Additional fees may apply.

Ceramic Frit *(Available in all standard RAL colors for singular color applications. Can be applied to glass glazing.)*

On Glass– Ceramic frit applied to the outer surface of tempered safety glass.

Laminated Glass Inner Surface– Ceramic frit applied to the inner surface between glass panels.

Dip Tech *(Available in a wide range of colors. Can be applied to glass glazing.)*

All Dip Tech artwork applications are digitally printed to the outer surface of glass at 720 DPI. Recommended for multicolored designs of high detail and minimal layering.

Router Cut *(Available on aluminum products.)*

Router cut out design on aluminum products. Recommended for designs of basic detail.

Router Engraving *(Available on aluminum and HDPE products.)*

Aluminum– Router engraved logo or lettering on aluminum products. Recommended for designs of basic detail.

HDPE– Router engraved logo or lettering on HDPE projects. Recommended for designs of basic detail.

Custom Artwork Application

Explain: _____

Artwork Specifications:

Artwork Dimensions: _____

Location and Placement: _____

Font Name and Size (if applicable): _____

Colors (if applicable, including vinyl background color choice): _____

Limitations and Guidelines

Each project will present unique limitations due to the nature of our products. Brasco will review each custom artwork project on a case-to-case basis and advise customers of the best artwork application process to meet the desired outcome. Certain artwork applications have different machining limitations which may effect the final appearance of the artwork. For this reason customers are advised to avoid complex layered designs.

Artwork Requirements

A high-resolution vector file is required; acceptable file formats include:

Adobe Illustrator (.ai)

Encapsulated Post Script (.EPS)

All artwork which contain fonts must have the fonts outline in vector format. The font name, size, and color has to be specified on this form.

Artwork files should be a minimum of 300 PPI.

If artwork is to be applied to more than one panel of glass or implemented into more than one area of the product, separate files OR separate artboards will be required. Artboards and files need to be specified as to which should be applied to what area of the product.

Each file or artboard and its contents MUST be to-scale; meaning the contents must be sized to how they will be viewed on the area when the design is applied.

Additional fees will apply if Brasco has to alter any artwork files.
