

## Standard Concrete Pad Recommendation

**Note:** This visual is for reference only. Brasco is not liable for concrete installation instructions unless structural concrete calculations are included with an order. Consult your local business codes for specific concrete pad requirements.

**Recommended:** Brasco recommends a minimum 4 inch thick, 3000 PSI concrete pad for areas with wind speeds lower than 110 MPH. For areas with wind speeds higher than 110 MPH, Brasco recommends a minimum 6 inch thick, 3000 PSI concrete pad. The concrete pad should allow a minimum of 6 inches around the shelter's perimeter to prevent damage when anchoring. Concrete may or may not require additional reinforcement.
